SELECTED EXPERIENCE

Engineering Lead

WINTR — Seattle, WA

07/2015–Present

- Collaborate with design team to plan, prototype, and craft superior experiences for technology products and services
- Deploy websites and web applications using Node.js, Ruby on Rails, React.js, and other web technologies to ensure consistency between client and user aspirations and finished products
- Steward the client experience regarding technical matters from kickoff through delivery

Software Engineer

Navigating Cancer — Seattle, WA

07/2012–07/2015

- Employed test-driven development to design and implement features from the database layer through the data model to the user interface, using Ruby, Rails, MySQL, RSpec, Sass, Haml, CoffeeScript, Backbone.js, and other cutting-edge web technologies
- Worked closely with Vice President of Product and Senior Product Owner to iteratively improve user interface and overall web application design for nearly 880,000 cancer survivors
- Utilized pair programming to ensure DRY, testable, maintainable code

Contributing Blogger

Adobe Typekit — San Francisco, CA

12/2011–10/2012

- Wrote the “About Face” section of the Adobe Typekit blog, periodically featuring a typeface from the library of the world’s leading JavaScript webfont delivery platform

Lead Front-End Developer

Study in the USA — Seattle, WA

06/2011–04/2012

- Conceptualized JavaScript interaction design and front-end code for large-scale web application with nearly 500,000 monthly unique visitors, localized in 12 languages
